8.6.3 ADN Checklist

1

ADN Checklist

concerning the observance of safety provisions and the implementation of the necessary measures for loading/unloading

– **Particulars of vessel**

………………………………………….. (name of vessel)

No. ………………………………………….. (official number)

………………………………………….. (vessel type)

– **Particulars of loading or unloading operations**

………………………………………….. (shore loading or unloading installation)

………………………………………….. (place)

………………………………………….. (date)

………………………………………….. (time)

– **Particulars of the cargo as indicated in the transport document**

Quantity m^3	Proper shipping name***	UN Number or Identification number	Dangers* ……………	Packing Group
……………..	…………………………………	……………..	……………	……………
..…………...	…………………………………	……………..	……………	……………
……………..	…………………………………	……………..	……………	……………

– **Particulars of last cargo****

Proper shipping name ***	UN Number or Identification number	Dangers* ……………	Packing Group
………………………………………………………	……………..	……………	……………
………………………………………………………	……………..	……………	……………
………………………………………………………	……………..	……………	……………

* *Dangers indicated in column (5) of Table C, as relevant (as mentioned in the transport document in accordance with 5.4.1.1.2 (c)).*

** *To be filled in only if vessel is to be loaded.*

*** *The proper shipping name given in column (2) of Table C of Chapter 3.2, supplemented, when applicable, by the technical name in parenthesis.*

2

Loading/unloading rate (not to be filled in if vessel is to be loaded with gas or have gas unloaded)

Proper shipping name**	Cargo tank number	agreed rate of loading/unloading					
		start		half way		end	
		rate m^3/h	quantity m^3	rate m^3/h	quantity m^3	rate m^3/h	quantity m^3
..…………………	…………	……..	………...	….…..	………..	……	………...
…………………...	….………	…..…	………...	……...	………..	……	………...
…………………...	…………	…..…	………...	………	………...	……	………...

Will the cargo piping be drained after loading or unloading by stripping or by blowing residual quantities to the shore installation/to the vessel?*

by blowing*
by stripping*

If drained by blowing, how?

……………………………………………………………………………………………………
(e.g. air, inert gas, sleeve)

…………………………………. kPa
(permissible maximum pressure in the cargo tank)

………………………………….litres
(estimated residual quantity)

Questions to the master or the person mandated by him and the person in charge at the loading/unloading place

Loading/unloading may only be started after all questions on the checklist have been checked off by "X", i.e. answered with YES and the list has been signed by both persons.

Non–applicable questions have to be deleted.

If not all questions can be answered with YES, loading/unloading is only allowed with consent of the competent authority.

---

* *Delete as appropriate.*

** *The proper shipping name given in column (2) of Table C of Chapter 3.2, supplemented, when applicable, by the technical name in parenthesis.*

		vessel	3 loading/ unloading place
1.	Is the vessel permitted to carry this cargo?	O*	O*
2.	(*Reserved*)		
3.	Is the vessel well moored in view of local circumstances?	O	–
4.	Have suitable means in accordance with 7.2.4.77 been provided for leaving the vessel, including in cases of emergency?	O	O
5.	Are the escape routes and the loading/unloading place adequately lighted?	O	O
6.	Vessel/shore connection		
	6.1 Is the piping for loading or unloading between vessel and shore in satisfactory condition?	–	O
	Is it correctly connected?	–	O
	6.2 Are all the connecting flanges fitted with suitable gaskets?	–	O
	6.3 Are all the connecting bolts fitted and tightened?	O	O
	6.4 Are the shoreside loading arms free to move in all directions and do the hose assemblies have enough room for easy movement?	–	O
7.	Are all flanges of the connections of the piping for loading and unloading and of the venting piping not in use, correctly blanked off?	O	O
8.1	Are suitable means of collecting leakages placed under the pipe connections which are in use and are they empty??	O	O
8.2	Is a water film as mentioned in 9.3.1.21.11 activated?	O	O
9.	Are the movable connecting pieces between the ballast and bilge piping on the one hand and the piping for loading and unloading on the other hand disconnected?	O	–
10.	Is continuous and suitable supervision of loading/unloading ensured for the whole period of the operation?	O	O
11.	Is communication between vessel and shore ensured?	O	O
12.1	For the loading of the vessel, is the venting piping, where required, or if it exists, connected with the vapour return piping?	O	O
12.2	Is it ensured that the shore installation is such that the pressure at the connecting-point of the vapour return piping and the venting piping cannot exceed the opening pressure of the pressure relief devices/high velocity vent valves (pressure at connecting point __ kPa)?	–	O*
12.3	When anti–explosion protection is required in Chapter 3.2, Table C, column (17) does the shore installation ensure that its vapour return piping is such that the vessel is protected against detonations and flame fronts from the shore.	–	O
13.	Is it known what actions are to be taken in the event of an “Emergency–stop” and an “Alarm”?	O	O

* *To be filled in only if vessel is to be loaded.*

			4
		vessel	loading/ unloading place
14.	Check on the most important operational requirements: – Are the required fire extinguishing systems and appliances operational? – Have all valves and other closing devices been checked for correct open – or closed position? – Has smoking been generally prohibited? – Are the flame operated heating applications on board turned off? – Is the voltage cut off from the radar installations? – Are all electrical installations and equipment marked red switched off? – Are all windows and doors closed?	 O O O O O O O	 O O O – – – –
15.1 15.2	Has the starting working pressure of the vessel's cargo discharge pump been adjusted to the permissible working pressure of the shore installation? (agreed pressure __ kPa) Has the starting working pressure of the shore pump been adjusted to the permissible working pressure of the on–board installation? (agreed pressure __ kPa)	O –	– O
16.	Is the liquid level alarm–installation operational?	O	–
17.	Is the following system plugged in, in working order and tested? Overflow prevention device □ when loading □ when unloading Device for switching off the on–board pump from the shore facility (only when unloading the vessel)	 O O	 O O
18.	To be filled in only in the case of loading or unloading of substances for the carriage of which a closed cargo tank or an open cargo tank with flame arrester is required: Are the cargo tank hatches and cargo tank inspection and sampling openings closed or protected by flame arresters fulfilling the requirements of column (16) of Table C of Chapter 3.2?	 O	 –
19.	When transporting refrigerated liquefied gases, has the holding time been determined according to 7.2.4.16.16, and is known and documented on board?	O**	O**
20	Is the loading temperature within the range of the maximum permissible temperature as prescribed in 7.2.3.28?	O**	O**

Checked, filled in and signed for the vessel: .... (name in capital letters) .... (signature)	 for the installation of loading and unloading: .... (name in capital letters) .... (signature)

** *To be filled in only if the vessel is to be loaded.*

Explanation

Question 3

"Well moored" means that the vessel is fastened to the pier or the cargo transfer station in such a way that, without intervention of a third person, movements of the vessel in any direction that could hamper the operation of the cargo transfer gear will be prevented. Established or predictable variations of the water–level at that location and special factors have to be taken into account.

Question 4

It must be possible to escape safely from the vessel at any time. If there is none or only one protected escape route available at the shoreside for a quick escape from the vessel in case of emergency, a suitable means of escape has to be provided on the vessel side if required in accordance with 7.2.4.77.

Question 6

A valid inspection certificate for the hose assemblies must be available on board. The material of the piping for loading and unloading must be able to withstand the expected loads and be suitable for cargo transfer of the respective substances. The piping for loading and unloading between vessel and shore must be placed so that it cannot be damaged by ordinary movements of the vessel during the loading and unloading process or by variations of the water. In addition, all flanged joints must be fitted with appropriate gaskets and sufficient bolt connections in order to exclude the possibility of leakage.

Question 10

Loading/unloading must be supervised on board and ashore so that dangers which may occur in the vicinity of piping for loading and unloading between vessel and shore can be recognized immediately. When supervision is effected by additional technical means it must be agreed between the shore installation and the vessel how it is to be ensured.

Question 11

For a safe loading/unloading operation good communications between vessel and shore are required. For this purpose telephone and radio equipment may be used only if of an explosion protected type and located within reach of the supervisor.

Question 13

Before the start of the loading/unloading operation the representative of the shore installation and the master or the person mandated by him must agree on the applicable procedure. The specific properties of the substances to be loaded/unloaded have to be taken into account.

Question 17

To prevent backflow from the shore, it is also necessary to activate the overflow prevention device on the vessel under certain circumstances when unloading. It is obligatory during loading and optional during unloading. Delete this item if it is not necessary during unloading.
