

IMDG - UN card

UN 1942

UN number 1942	Shipping name AMMONIUM NITRATE AMMONIUMNITRAT					
Class 5.1	Packing group III	Hazard labels 5.1	Marine pollutant Maybe	EmS F-H, S-Q	ADR transport category: 3 ADR tunnel: (E)	
Hazard labels 		Marking UN 1942 AMMONIUM NITRATE				
Packaging	Can be packed in approved packaging according to packing instruction P002. Can also be packaged in large packagings (LP02).					
Mixed packaging	The substance may be packaged with other substances in the same outer packaging if: - it is permitted to load the substances together, and - the substances do not react dangerously with one another.					
Remarks	The transport of the following substances is prohibited: AMMONIUM HYPOCHLORITE; AMMONIUM NITRATE liable to self-heating sufficient to initiate decomposition; AMMONIUM NITRITES and mixtures of an inorganic nitrite with an ammonium salt; CHLORIC ACID, AQUEOUS SOLUTION with more than 10% chloric acid; ETHYL NITRITE pure; HYDROCYANIC ACID, AQUEOUS SOLUTION (HYDROGEN CYANIDE, AQUEOUS SOLUTION) with more than 20% hydrogen cyanide; HYDROGEN CHLORIDE, REFRIGERATED LIQUID; HYDROGEN CYANIDE SOLUTION, IN ALCOHOL with more than 45% hydrogen cyanide; MERCURY OXYCYANIDE pure; METHYL NITRITE; PERCHLORIC ACID with more than 72% acid, by mass; SILVER PICRATE, dry or wetted with less than 30% water by mass; ZINC AMMONIUM NITRITE. See also special provisions 349, 350, 351, 352 and 353 (SP 900). UN 1942 may be transported in bulk container if approved by the competent authority (SP 952). Flexible bulk containers (BK3) are only permitted in accordance with 4.3.4 (SP 967).					
Properties and observations	Crystals, granules or prills. Soluble in water. Supporter of combustion. A major fire aboard a ship carrying this substance may involve a risk of explosion in the event of contamination (e.g. by fuel oil) or strong confinement. An adjacent detonation may also involve the risk of explosion. If heated strongly, decomposes, giving off toxic gases and gases which support combustion. Transport of AMMONIUM NITRATE liable to self-heating sufficient to initiate decomposition is prohibited.					
Tank type:	T1	Transport in bulk			Orange panel	
Tank provisions:	TP33	BK2 / BK3			1942	
Stowage and segregation						
Stowage	Must be protected from sources of heat (SW1). Category A only if the special stowage provisions of 7.4.1.4 and 7.6.2.8.4 of the IMDG Code are complied with (SW14). When transported in BK3 bulk container, see 7.6.2.12 and 7.7.3.9 of the IMDG Code (SW23).					
Segregation	Check the segregation table for sea transport. The substance belongs to group: ammonium compounds (SGG2). Stow "separated from" class 4.1 (SG16). Stow "separated from" SGG3 – bromates (SG42). Stow "separated from" SGG4 – chlorates (SG45). Stow "separated from" SGG5 – chlorites (SG47). "Seperated from": May not be loaded into the same transport unit.					
Placarding of the transport unit	Containers, semi-trailers and tank containers must be marked with enlarged hazard labels (placards) on all four sides. Railway wagons must at least be marked with placards on both sides. All other transport units, e.g. trucks etc., must at least be placarded on both sides and at the back. The placards must have a size of at least 250 x 250 mm, and be of such quality that the labeling is still visible after 3 months at sea.					
Foodstuff	The substance is not required to be kept separate from food and feed.					
Limited quantities (LQ) <i>Combination packaging</i> Inner: 5 kg Outer: 30 kg <i>Trays</i> Inner: 5 kg Outer: 20 kg		Excepted quantities (EQ) <i>Combination packaging</i> Inner: 30 mg Outer: 1000 mg Must be packed in an intermediate packaging with cushioning material. Max 1000 parcels per vehicle/container.
