

IMDG - UN card

UN 2426

UN number 2426		Shipping name AMMONIUM NITRATE, LIQUID AMMONIUMNITRAT, FLYDENDE				
Class 5.1	Packing group —	Hazard labels 5.1	Marine pollutant Maybe	EmS F-H, S-Q	ADR transport category: 0 ADR tunnel: (E)	
Hazard labels 		Marking UN 2426 AMMONIUM NITRATE, LIQUID				
Packaging		Cannot be packed in packaging.				
Mixed packaging		The substance may be packaged with other substances in the same outer packaging if: - it is permitted to load the substances together, and - the substances do not react dangerously with one another.				
Remarks		Provided the ammonium nitrate remains in solution under all conditions of transport, aqueous solutions of ammonium nitrate, with not more than 0.2% combustible material, in a concentration not exceeding 80%, are not subject to the provisions of the IMDG Code (SP 252). The concentration and temperature of the solution at the time of loading, its percentage of combustible material and of chlorides as well as the contents of free acid shall be certified (SP 942).				
Properties and observations		Hot aqueous solution of not more than 93% ammonium nitrate with not more than 0.2% combustible material (including organic material calculated as carbon) and free from any other added matter, containing at least 7% water, while the maximum content of chloride ions should not exceed 0.02%. May cause fire and explosion in contact with combustible material (e.g. wood, straw, cotton, oil, sugar, etc.), acids, and other class 5.1 substances and burn fiercely. Maximum allowable transport temperature of the solution 140 °C. This temperature should be indicated on the transport unit. The acidity (pH) of the cargo when diluted with ten parts of water to one part of cargo, by mass, should be between 5.0 and 7.0. The concentration and temperature of the solution at the time of loading, its percentage of combustible materials and of chlorides, and the contents of free acid should be certified.				
Tank type:	T7	Transport in bulk			Orange panel	
Tank provisions:	TP1 TP16 TP17	Not allowed			2426	
Stowage and segregation						
Stowage		There are no special requirements for stowage.				
Segregation		Check the segregation table for sea transport. The substance belongs to group: ammonium compounds (SGG2). Stow "separated from" SGG3 – bromates (SG42). Stow "separated from" SGG4 – chlorates (SG45). Stow "separated from" SGG5 – chlorites (SG47). Stow "separated from" combustible material (particularly liquids). Combustible material does not include packing materials or dunnage (SG48). "Seperated from": May not be loaded into the same transport unit.				
Placarding of the transport unit		Containers, semi-trailers and tank containers must be marked with enlarged hazard labels (placards) on all four sides. Railway wagons must at least be marked with placards on both sides. All other transport units, e.g. trucks etc., must at least be placarded on both sides and at the back. The placards must have a size of at least 250 x 250 mm, and be of such quality that the labeling is still visible after 3 months at sea.				
Foodstuff		The substance is not required to be kept separate from food and feed.
