

IMDG - UN card

UN 2698

UN number 2698		Shipping name TETRAHYDROPHTHALIC ANHYDRIDES TETRAHYDROPHTHALSYREANHYDRID				
Class 8	Packing group III	Hazard labels 8	Marine pollutant Maybe	EmS F-A, S-B	<i>ADR transport category: 3 ADR tunnel: (E)</i>	
Hazard labels 		Marking UN 2698 TETRAHYDROPHTHALIC ANHYDRIDES				
Packaging Can be packed in approved packaging according to packing instruction P002. Note: Packagings are not required to meet the performance tests in Chapter 6.1 (PP14). Can also be packaged in large packagings (LP02).						
Mixed packaging The substance may be packaged with other substances in the same outer packaging if: - it is permitted to load the substances together, and - the substances do not react dangerously with one another.						
Remarks The packages, including bales, are exempt from labelling provided that they are marked with the appropriate class (e.g. "class 4.2") (SP 29). Phthalic anhydride in the solid state and tetrahydrophthalic anhydride, with not more than 0.05% maleic anhydride, are not subject to the provisions of the IMDG Code. Phthalic anhydride molten at a temperature above its flashpoint, with not more than 0.05% maleic anhydride, shall be classified under UN 3256 (SP 169). A consignment of this substance that is accompanied by a shipper's certificate stating that it does not contain more than 0.05% maleic anhydride is not subject to the provisions of the IMDG Code (SP 939). Packages, with the exception of bales, shall also display the proper shipping name and the UN number of the substance that they contain in accordance with 5.2.1. In any case, the packages, including bales, are exempt from class marking provided that they are loaded in a cargo transport unit and that they contain goods to which only one UN number has been assigned. The cargo transport units in which the packages, including bales, are loaded shall display any relevant labels, placards and marks in accordance with chapter 5.3 (SP 973).						
Properties and observations White crystalline powders. React with water, evolving heat and forming tetrahydrophthalic acid. Cause burns to skin, eyes and mucous membranes. When heated, evolve acrid fumes which are irritating to skin, eyes and mucous membranes.						
Tank type: T1		Transport in bulk		Orange panel		
Tank provisions: TP33		Not allowed		2698		
Stowage and segregation						
Stowage There are no special requirements for stowage.						
Segregation Check the segregation table for sea transport. The substance belongs to group: acids (SGG1). Stow "separated from" SGG18 – alkalis (SG36). Stow "separated from" SGG6 – cyanides (SG49). "Seperated from": May not be loaded into the same transport unit.						
Placarding of the transport unit Containers, semi-trailers and tank containers must be marked with enlarged hazard labels (placards) on all four sides. Railway wagons must at least be marked with placards on both sides. All other transport units, e.g. trucks etc., must at least be placarded on both sides and at the back. The placards must have a size of at least 250 x 250 mm, and be of such quality that the labeling is still visible after 3 months at sea.						
Foodstuff The substance must be kept separate from food and feedstuffs.						
Limited quantities (LQ) <i>Combination packaging</i> Inner: 5 kg Outer: 30 kg <i>Trays</i> Inner: 5 kg Outer: 20 kg		Excepted quantities (EQ) <i>Combination packaging</i> Inner: 30 mg Outer: 1000 mg Must be packed in an intermediate packaging with cushioning material. Max 1000 parcels per vehicle/container.
