| <b>Remarks</b> Plastics moulding compounds may be made from polystyrene, poly(methyl methacrylate) or other polymeric material (SP 207). Hydrogen peroxide aqueous solutions with less than 8% hydrogen peroxide are not subject to the provisions of the IMDG Code (SP 65).                                                                                                  |                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                  |                                                                                                                                                                                                                                                                                                                 |                                                        |  |
| <b>Properties and observations</b> A moulding material consisting predominantly of polystyrene, poly(methyl methacrylate) or other polymeric material and containing 5% to 8% of a volatile hydrocarbon which is predominantly pentane. During storage, a small proportion of this pentane is released to the atmosphere; this proportion increases at elevated temperatures. |                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                  |                                                                                                                                                                                                                                                                                                                 |                                                        |  |
