

IMDG - UN card

UN 3375

UN number 3375		Shipping name AMMONIUM NITRATE EMULSION / SUSPENSION / GEL AMMONIUMNITRAT, EMULSION / AMMONIUMNITRAT, SUSPENSION / AMMONIUMNITRAT, GEL				
Class 5.1	Packing group II	Hazard labels 5.1	Marine pollutant Maybe	EmS F-H, S-Q	ADR transport category: 2 ADR tunnel: (E)	
Hazard labels 		Marking UN 3375 AMMONIUM NITRATE EMULSION / SUSPENSION / GEL				
Packaging		Can be packed in approved packaging according to packing instruction P505.				
Mixed packaging		The substance may be packaged with other substances in the same outer packaging if: - it is permitted to load the substances together, and - the substances do not react dangerously with one another.				
Remarks		This entry applies to non-sensitized emulsions, suspensions and gels consisting primarily of a mixture of ammonium nitrate and fuel, intended to produce a Type E blasting explosive only after further processing prior to use. The mixture for emulsions typically has the following composition: 60–85% ammonium nitrate, 5–30% water, 2–8% fuel, 0.5–4% emulsifier agent, 0–10% soluble flame suppressants, and trace additives. Other inorganic nitrate salts may replace part of the ammonium nitrate. The mixture for suspensions and gels typically has the following composition: 60–85% ammonium nitrate, 0–5% sodium or potassium perchlorate, 0–17% hexamine nitrate or monomethylamine nitrate, 5–30% water, 2–15% fuel, 0.5–4% thickening agent, 0–10% soluble flame suppressants, and trace additives. Other inorganic nitrate salts may replace part of the ammonium nitrate. Substances shall satisfy the criteria for classification as an ammonium nitrate emulsion, suspension or gel, intermediate for blasting explosives (ANE) of Test Series 8 of the Manual of Tests and Criteria, part I, section 18 and be approved by the competent authority (SP 309).				
Properties and observations		Non-sensitized emulsions, suspensions and gels consisting primarily of a mixture of ammonium nitrate and fuel, intended to produce a Type E blasting explosive only after further processing prior to use. Substances shall satisfactorily pass test series 8 of the Manual of Tests and Criteria, part I, section 18 and be approved by the competent authority.				
Tank type:	T1	Transport in bulk		Orange panel		
Tank provisions:	TP1 TP9 TP17 TP32	Not allowed		3375		
Stowage and segregation						
Stowage	Must be protected from sources of heat (SW1).					
Segregation	Check the segregation table for sea transport. The substance belongs to group: ammonium compounds (SGG2). Stow "separated from" class 4.1 (SG16). Stow "separated from" SGG3 – bromates (SG42). Stow "separated from" SGG4 – chlorates (SG45). Stow "separated from" SGG5 – chlorites (SG47). "Seperated from": May not be loaded into the same transport unit.					
Placarding of the transport unit	Containers, semi-trailers and tank containers must be marked with enlarged hazard labels (placards) on all four sides. Railway wagons must at least be marked with placards on both sides. All other transport units, e.g. trucks etc., must at least be placarded on both sides and at the back. The placards must have a size of at least 250 x 250 mm, and be of such quality that the labeling is still visible after 3 months at sea.					
Foodstuff	The substance is not required to be kept separate from food and feed.					
Limited quantities (LQ)			Excepted quantities (EQ)			
Combination packaging			Combination packaging			
Inner: Not allowed			Inner: 30 mg el. mL			
Outer:			Outer: 500 mg el. mL			
Trays			Must be packed in an intermediate packaging with cushioning material. Max 1000 parcels per vehicle/container.			
Inner: Not allowed						
Outer:						
			Parcel label:
