| <b>Properties and observations</b>                                                                                                                   |                            | A wide variety of toxic liquids. In contact with acids, arsenic sulphide evolves hydrogen sulphide, a toxic and flammable gas. Toxic if swallowed, by skin contact or by inhalation.                                                                                                                                                                                                                                                                     |                                  |                                                                                                                                                                                                                                                                                                               |                                                              |  |
