Hazard labels 		Marking UN 2795 BATTERIES, WET, FILLED WITH ALKALI				
Packaging		Can be packed in suitable packaging according to packing instruction P801.				
Mixed packaging		The substance may be packaged with other substances in the same outer packaging if: - it is permitted to load the substances together, and - the substances do not react dangerously with one another.				
Remarks		Batteries need not be individually marked and labelled if the pallet bears the appropriate mark and label (SP 295).				
Properties and observations		Metal plates immersed in alkaline electrolyte in a glass, hard rubber or plastics receptacle. When electrically charged, may cause fire through short-circuiting of terminals. Alkaline electrolyte is corrosive to aluminium, zinc and tin. Reacts violently with acids. Causes burns to skin, eyes and mucous membranes. Used batteries being transported for disposal or reclamation should be carefully checked prior to shipment to ensure the integrity of each battery and its suitability for transport.
