

IMDG - UN card

UN 3212

UN number 3212		Shipping name 🇬🇧 HYPOCHLORITES, INORGANIC, N.O.S. 🇩🇰 HYPOCHLORITER, UORGANISKE, N.O.S.				
Class 5.1	Packing group II	Hazard labels 5.1	Marine pollutant Maybe	EmS F-H, S-Q	ADR transport category: 2 ADR tunnel: (E)	
Hazard labels 		Marking UN 3212 HYPOCHLORITES, INORGANIC, N.O.S. (Note: The proper shipping name must be supplemented with the substance's technical description in brackets)				
Packaging		Can be packed in approved packaging according to packing instruction P002.				
Mixed packaging		The substance may be packaged with other substances in the same outer packaging if: - it is permitted to load the substances together, and - the substances do not react dangerously with one another.				
Remarks		Mixtures of a hypochlorite with an ammonium salt are not to be accepted for transport. UN 1791 hypochlorite solution is a substance of class 8 (SP 349). The transport of the following substances is prohibited: AMMONIUM HYPOCHLORITE; AMMONIUM NITRATE liable to self-heating sufficient to initiate decomposition; AMMONIUM NITRITES and mixtures of an inorganic nitrite with an ammonium salt; CHLORIC ACID, AQUEOUS SOLUTION with more than 10% chloric acid; ETHYL NITRITE pure; HYDROCYANIC ACID, AQUEOUS SOLUTION (HYDROGEN CYANIDE, AQUEOUS SOLUTION) with more than 20% hydrogen cyanide; HYDROGEN CHLORIDE, REFRIGERATED LIQUID; HYDROGEN CYANIDE SOLUTION, IN ALCOHOL with more than 45% hydrogen cyanide; MERCURY OXYCYANIDE pure; METHYL NITRITE; PERCHLORIC ACID with more than 72% acid, by mass; SILVER PICRATE, dry or wetted with less than 30% water by mass; ZINC AMMONIUM NITRITE. See also special provisions 349, 350, 351, 352 and 353 (SP 900). HYPOCHLORITE MIXTURES with 10% or less available CHLORINE are not subject to the provisions of the IMDG Code (SP 903).				
Properties and observations		Solids. Critical ambient temperature of decomposition may be as low as 60 °C. May cause fire in contact with organic material or ammonium compounds. React with acids, evolving chlorine, an irritating, corrosive and toxic gas. In the presence of moisture, corrosive to most metals. Dust irritates mucous membranes. Transport of ammonium hypochlorite and mixtures of a hypochlorite with an ammonium salt is prohibited.				
Tank type:	T3	Transport in bulk		Orange panel		
Tank provisions:	TP33	Not allowed		3212		
Stowage and segregation						
Stowage		Must be protected from sources of heat (SW1). Category E, for closed cargo transport unit and pallet boxes only. Ventilation may be required. The possible need to open hatches in case of fire to provide maximum ventilation and to apply water in an emergen				
Segregation		Check the segregation table for sea transport. The substance belongs to group: hypochlorites (SGG8). Stow "separated from" SGG1 – acids (SG35). Stow "separated from" SGG2 – ammonium compounds (SG38). Stow "separated from" SGG6 – cyanides (SG49). Stow "separated from" liquid organic substances (SG53). Note that for this substance, the consignor must assign the substance to a segregation group based on the substance's physical and chemical properties, if applicable. "Seperated from": May not be loaded into the same transport unit.				
Placarding of the transport unit		Containers, semi-trailers and tank containers must be marked with enlarged hazard labels (placards) on all four sides. Railway wagons must at least be marked with placards on both sides. All other transport units, e.g. trucks etc., must at least be placarded on both sides and at the back. The placards must have a size of at least 250 x 250 mm, and be of such quality that the labeling is still visible after 3 months at sea.				
Foodstuff		The substance is not required to be kept separate from food and feed.				
Limited quantities (LQ) <i>Combination packaging</i> Inner: 1 kg Outer: 30 kg <i>Trays</i> Inner: 1 kg Outer: 20 kg		Parcel label: 		Excepted quantities (EQ) <i>Combination packaging</i> Inner: 30 mg Outer: 500 mg Must be packed in an intermediate packaging with cushioning material. Max 1000 parcels per vehicle/container.
