| <b>Remarks</b>                                                                                            | This substance may be transported under the provisions of class 4.1 only if it is so packaged that the percentage of diluent will not fall below that stated, at any time during transport (see 2.4.2.4) (SP 28).                                                                                                                                                                                                                                 |                                                                                 |                                                              |                        |                                                      |  |
| <b>Properties and observations</b>                                                                        | Desensitized explosive. Substance in pure form consists of odourless yellow crystals. When involved in a fire, evolves toxic fumes; in closed compartments, these fumes may form an explosive mixture with air. Explosive and sensitive to shock and heat in the dry state. Harmful if swallowed or by skin contact. Reacts violently with heavy metals and their salts.                                                                          |                                                                                 |                                                              |                        |                                                      |  |
